

ABSTRACT OF DISCLOSURE

The present invention relates to a method of displaying directories differently based on attributes of files included therein. The present method examines a directory structure and the attributes of data files recorded on a recording medium, generates a mark for visually differentiating directories including at least one file of a pre-specified attribute, based on the examined attribute information, and displays a generated mark with the examined directory structure information. Owing to the present invention, a user can recognize directories including at least one file having a desired attribute at a glance, therefore, reproduction, selection, or copy for a file having a desirable attribute can be conducted very quickly.
